

Surveillance Testing Policy SSL V5.1

Version SSL V5.1 - Draft 1

Proposed Effective Date:

Products selected after October 1, 2021

Text in yellow boxes indicates proposed changes from the previous version that are open for comment.

Objective

The DLC Surveillance Testing Program actively monitors the validity of data and other information submitted to the DLC Solid-State Lighting QPL (SSL QPL) to protect the integrity and value of the QPL for all stakeholders. This policy outlines the process for selection of products from the QPL for surveillance testing and for verifying the safety certification documentation. The DLC may seek to implement additional efforts toward these objectives in future policy development cycles.

Surveillance Testing Program Processes

A. Product Selection

1. In order to maximize the use of resources, the surveillance program will focus primarily on identifying products with higher-than-average risk of non-compliance. The following criteria will be considered during the selection process to identify these products:
 - a. Products whose performance is close to meeting the tolerance of the Technical Requirements under which they were qualified (e.g. a Premium product will be evaluated against the Premium requirements).
 - b. Products whose performance greatly exceeds the Technical Requirements.
 - c. Listed products with past application issues, including, but not limited to, test reports with reporting issues that question the validity of the test data, supplemental documentation with issues that question the validity of the documentation, and indications of product misrepresentation.

- 25 d. Complaints from stakeholders, including DLC Members. Complaints from non-
26 Members will require documentation before being considered as valid selection
27 criteria.
- 28 e. Products of manufacturers that have chosen not to participate in the surveillance
29 testing investigation after being selected in previous surveillance testing rounds (see
30 section B.2.).
- 31 f. Products of manufacturers that have a history of failing results from previous
32 surveillance testing rounds.
- 33 g. Products randomly selected from the QPL.
- 34 2. The frequency and the number of products selected through the surveillance testing program
35 for each round of testing is at the sole discretion of the DLC. Product selection may focus on
36 one of the criteria above or several. Regardless of the selection criteria, the metrics reported
37 in the testing will remain constant, depending on the type of test ordered (integrating
38 sphere/goniophotometer).
- 39 3. As always, manufacturers may voluntarily delist their products from the QPL at any time
40 without penalty. With the Surveillance Testing Program, this must occur *prior* to being
41 selected for testing to avoid potential consequences. Please email
42 applications@designlights.org for more information on delisting products.
- 43 Manufacturers should factor in their product performance data and possible risk for failure to
44 determine if voluntarily removing products from the QPL prior to being selected is
45 appropriate. For example, products that qualified using tolerances to meet the Technical
46 Requirements may carry a higher risk of not meeting the Technical Requirements during
47 surveillance testing.
- 48 4. If a product and/or component necessary for testing is not available for procurement at the
49 time of selection (i.e. it is no longer for sale/manufactured), it will be considered declining to
50 participate. Exceptions will be considered for made-to-order products. Products that are no
51 longer sold should be proactively removed from the QPL by the manufacturer.
- 52 5. Products cannot be subject to “double jeopardy”. If a product has been tested and passes
53 through the Surveillance Testing Program and has not been updated in any manner, it will not
54 be selected again.
- 55 6. Manufacturers who have three selections (or more) that all yield passing results within two
56 consecutive rounds of surveillance testing will be granted an exemption from selection during
57 the following round. This temporary exemption is estimated to last approximately 6-12
58 months and applies to the verification of product performance only – not safety certification.
- 59 7. Both OEM and private labeled products are eligible for selection. All manufacturers, OEM and
60 private labeler alike, are responsible for the data on the QPL associated with their products.

61

62 **B. Notification to Selected Manufacturer**

63 The DLC will notify the selected manufacturer by email using the contact information provided in
64 the DLC Application Portal. If a given manufacturer account has multiple users, all users registered
65 to the account will be notified. If a selection is accepted, only the manufacturer-designated contacts
66 will be contacted for the remainder of that selection.

67 The selected manufacturer will have 10 business days from the date of notification to respond to
68 the selection email. Selected manufacturers have two options in responding: accept the selection
69 and continue with the surveillance testing process, or decline the selection, which will result in the
70 selected product and associated products being removed from the QPL. See Section F for further
71 details.

72 If no response is received within 10 business days, or if there is no anticipated action taken by the
73 manufacturer as determined by the DLC, the selected product and associated products will be
74 delisted. See Section F for further details. Selected manufacturers may seek additional information
75 about the selection during this 10-day period; however, action will be taken on the tenth day of the
76 period.

77 1. Accepting the Selection

- 78 a. If the selected manufacturer agrees to move forward, the investigation will begin.
- 79 b. Accepting the selection indicates that the product can be procured within a
80 reasonable timeframe (eight weeks unless otherwise agreed upon with the DLC at the
81 time of acceptance).

82 2. Declining the Selection

- 83 a. The selected manufacturer has the option to decline to participate, which will result in
84 the product and all associated products being removed from the QPL. For further
85 information on consequences, see Section F.

86 **C. Invoice and Procurement**

87 Products undergoing investigation will remain confidential between the selected manufacturer,
88 testing lab, and the DLC. Outside parties, including other manufacturers, distributors, and other end
89 users will not have access to investigation information. DLC Member utilities may have access to
90 limited information.

91 1. Invoicing

- 92 a. After the DLC receives completed acceptance documentation, an invoice will be sent
93 to the manufacturer to cover surveillance program costs.

- 94 b. If the invoice is not paid within 30 days, the product, as well as any associated
95 products, will be removed from the QPL. See Section F for further information on
96 consequences. Any issues paying within the allotted timeframe must be discussed
97 with the DLC upon receipt of the invoice.

98 c. Procurement information will not be sent until the invoice for that selection has been
99 paid and processed.

100 d. Manufacturers opting for a wire transfer must pay the fees associated with the
101 transfer of funds.

102 2. Product Procurement

103 a. The DLC may procure products from any number of sources, but will primarily procure
104 directly from the manufacturer.

105 b. The number of samples required for surveillance testing will be equivalent to the
106 number needed in the original qualification testing, unless otherwise stated.

107 3. If chosen, manufacturers are required to supply the product as it would be supplied to a
108 customer. It should be identical to what a customer would receive and go through the same
109 internal processes. Supplying a sample(s) which does not meet these criteria may result in the
110 selected product being found non-compliant (with associated consequences).

111 a. Samples used for surveillance testing shall not be the same samples tested and
112 submitted previously for qualification.

113 b. Product prototypes or “engineering samples” may not be used for surveillance testing.

114 4. Any components required between the mains and the product (such as a ballast for a UL Type
115 A linear replacement lamp, a stepdown transformer, Option B reference housing, etc.), must
116 also be supplied to the lab by the selected manufacturer during the procurement phase . To
117 minimize confusion, these should be shipped at the same time as the product.

118 5. Products are expected to be shipped within eight weeks of procurement information being
119 sent. Products expected to take more than eight weeks must be disclosed to the DLC at the
120 time of accepting the selection, and an explanation must be provided. In certain cases, a
121 substitution may be allowed at the sole discretion of the DLC surveillance team.

122 6. An OEM who does not stock the product or does not otherwise have the samples required for
123 testing may arrange (of their own accord) to have the equivalent model from one of their
124 private labelers procured and tested instead. Given the same scenario, private labelers may
125 also have the equivalent OEM product procured and tested instead. In either case, the
126 selected manufacturer must inform the surveillance testing team prior to, or within five
127 business days of, receiving procurement information. The DLC will confirm that this is
128 acceptable, pending review of the Private Label Agreements on file from original DLC
129 qualification.

130 7. Manufacturers must select one of two options for their product after testing is complete:

131 a. The product is returned (at manufacturer expense).

132 b. The product is destroyed and discarded by the laboratory.

133 If an option is not specified by the time testing is complete, the DLC reserves the right to
134 dispose of the product.

135 **D. Product Testing and Evaluation**

136 **Product Testing Procedures**

- 137 1. Testing will be conducted only by pre-approved labs contracted by the DLC for surveillance
138 testing. Approved laboratories were determined by responding to a Request for Proposal
139 (RFP) issued by the DLC. Specific lab locations will be chosen for any individual investigation at
140 the DLC’s discretion. Factors may include proximity (for shipping purposes), availability of a
141 particular reference housing, etc.
- 142 2. The metrics to be tested will be dependent on the type of test (integrating sphere or
143 goniophotometer) being used.
- 144 3. Dual Mode products (UL Type A or B) will be tested using an approved ballast. The ballast shall
145 be sent by the manufacturer with the product, as described in Section C.4.
- 146 4. Products requiring testing in a reference housing will be tested in a housing selected by the
147 DLC from the Approved and Pre-approved Equivalent lists (found [here](#) for retrofit kits, [here](#) for
148 HID replacement lamps, and [here](#) for four pin-base replacement lamps for CFLs. As
149 qualification policy states, a product is expected to meet the Technical Requirements in any of
150 the approved reference housings.
- 151 a. Alternatively, a manufacturer may provide the preferred housing for surveillance
152 testing (must be an approved reference housing). If this option is chosen, the
153 manufacturer is responsible for all costs associated with providing the housing.
- 154 5. The test lab will look for any obvious signs that the product is not performing as intended (i.e.
155 inability to stabilize the product). The manufacturer will be notified in those cases and testing
156 will resume once the issue has been resolved. This may necessitate procurement of new
157 samples (at manufacturer expense).

158 **Product Evaluation**

159 The DLC will evaluate every product against two tables. Table 1 is used to verify that the product
160 meets the Technical Requirements. Table 2 is used to ensure that the product not only meets the
161 Technical Requirements, but also lists accurate information on the QPL. A snapshot of the QPL will
162 be taken at the time of selection, and that data will be used as a comparison to the data taken
163 during surveillance testing. Any effort to update a selected product after notification will not be
164 considered unless agreed upon with the DLC prior to the update.

165

166

Table 1: Verifying the Product Meets the Technical Requirements

Metric	Tolerance
Light Output	-10%
Luminaire Efficacy	-4%
Allowable CCT	Defined by ANSI C78.377-2017*†
Color Rendition	All reported color rendition metrics except IES Rcs,h1: -1 point IES Rcs,h1: -1%
Power Factor	-3%
THD	+5%
Zonal Lumens	Refer to Table 5 of the Technical Requirements Tables
Beam Angle (linear replacement lamps only)	-5°

167

**Defined by ANSI C78.377-2017. It is also referred to for D_{uv} and (x,y) chromaticity coordinates tolerances for indoor categories.*

168

† Flexible binning, per the standard, may be used. Applicability for use of flexible binning will be determined by the reported CCT value on the QPL. Flexible binning may only be applied if the reported value falls outside of a “traditional” ANSI bin (2700K, 3000K, ..., 5700K, etc). If a product is rated at a specific CCT which is not incorporated as part of the ANSI standard, the DLC will round to the nearest 100K for evaluation purposes.

169

170

171

172

Table 2: Verifying Accuracy of QPL Product Data

Metric	Tolerance
Light Output	-9.6%
System Wattage	+12.7%
All reported color rendition metrics	-5.9%

173

174

1. Product spec sheets will be reviewed for potential product misrepresentation (i.e. the product qualified is different than the product received during surveillance testing). This will include the spec sheet submitted for qualification and may include review of spec sheets found in the marketplace.

175

176

177

178

- a. Due to the varying nature of spec sheets, no two cases of product misrepresentation are alike. As an example, a product with a form factor that has changed since qualification would not be allowed under the Surveillance Testing Policy.

179

180

181

2. Upon completion of testing, the DLC will review the results. The established tolerances (above) will be applied to the test data to verify compliance.

182

183

- a. When reviewing against Table 1:

184

- i. Parent products will have tested data reviewed. Reported data of parent products found to not be in compliance with policy will be corrected outside of surveillance testing.

185

186

187

- ii. Child products will be evaluated against reported data only.

- 188 b. When reviewing against Table 2:
- 189 i. Parent products will have both the tested and reported data listed on the QPL
- 190 reviewed. These products will only be considered non-compliant if they fail to
- 191 meet the Table 2 tolerances for both the tested *and* reported data.
- 192 ii. Child products will be evaluated against reported data only.
- 193 c. Products will be reviewed against the Primary Use Designation (PUD) that was
- 194 selected for surveillance testing. If non-compliant, the product will be removed from
- 195 the selected PUD on the QPL. Additional PUDs will remain on the QPL unless the
- 196 results (such as failing efficacy) determine that the product does not meet the
- 197 requirements of the additional PUDs.
- 198 d. Some Technical Requirements are not explicitly listed in Table 1 or Table 2. These
- 199 include requirements such as lumens per foot, zonal lumens, or zonal efficacy. For
- 200 these requirements, the root metric will be examined (e.g. light output when
- 201 examining lumens per foot).
- 202 e. For products that were qualified using [allowances](#), the allowance will be applied to
- 203 the requirement first, followed by the tolerance.
- 204 3. Upon review of the test results, the DLC will notify the manufacturer of the results with a final
- 205 ruling on the outcome of the testing. The outcomes are as follows:
- 206 a. The sample meets or exceeds the DLC Technical Requirements and tests within Table
- 207 2 tolerances: the product is considered compliant and no further action is needed.
- 208 b. The sample failed to meet the DLC Technical Requirements when using Table 1
- 209 tolerances: the product is considered non-compliant. See Section F for consequences.
- 210 c. The sample meets the DLC Technical Requirements, but falls outside Table 2
- 211 tolerances: the product is considered non-compliant. See Section F for consequences.

212 E. Appeals

- 213 1. The selected manufacturer will have the option to appeal the results. This process must be
- 214 started within five business days of receiving the results from the DLC. Any fees required to
- 215 investigate the appeal will be at the sole responsibility of the manufacturer requesting the
- 216 appeal. Appeals are only applicable to the results of testing; there is no appeal process for the
- 217 consequences enforced. The product(s) may be delisted from the QPL upon failure and during
- 218 the appeals process. If the original ruling is overturned, the product(s) will return to the QPL
- 219 with the original date of qualification at the conclusion of the appeal.
- 220 2. An appeal must include:
- 221 a. Sufficient detail (with technical justification) that addresses the reason for questioning
- 222 the validity of the test results, as well as a remedy to the situation.

- 223 b. Agreement to pay the fees associated with the appeal. Fees will be based on
224 administrative cost of the appeal and the fees associated with any additional required
225 testing or product procurement to resolve the appeal.
- 226 3. The following are some examples of items that will not be considered during the appeals
227 process:
- 228 a. Manufacturers indicating a change to a supplier's process.
229 b. The wrong product was sent.
230 c. Different test data on the same product with no technical justification.
- 231 4. The DLC will review the appeal and reserves the right to ask for additional information or
232 reject the appeal if sufficient information to explain the situation cannot be provided. Appeals
233 will either be:
- 234 a. Accepted: An accepted appeal may require additional product testing. If so, the
235 procedures listed above (for procurement and testing) will be repeated. Any new test
236 results will be used to make a final determination of the tested product's
237 performance.
238 b. Rejected: If an appeal is rejected, the original failure ruling will stand and the
239 product(s) will remain delisted from QPL.
- 240 5. The manufacturer will be notified at the end of the appeals process as to the results of the
241 appeal. Appeal results are final.
- 242 6. Products will not be returned to the manufacturer until the entirety of the process, including
243 appeals, has concluded.

244 F. Consequences

245 The following is a summary of consequences that may be implemented due to non-compliance with
246 DLC policy. Additional consequences may be imposed at the discretion of the DLC. The intent of any
247 consequence is to ensure that products that have been listed with unreliable data on the QPL are
248 subject to appropriate corrective actions.

249 Non-Compliance Due to Product Testing

- 250 1. The selected product fails to meet the DLC Technical Requirements using Table 1 tolerances:
- 251 a. **First instance:** A product that fails surveillance testing for the first time will be
252 removed from the QPL. Products associated with the failed product will also be
253 delisted; this includes all family members (regardless of whether the selected product
254 was a parent or child product) and private labels. If the selection was a private labeled
255 product, this means that the equivalent OEM product, as well as any other equivalent
256 private labels, will be delisted. DLC Members will have access to generalized
257 information about products that have been removed from the QPL due to surveillance
258 testing.

- 259 b. **Second instance:** All first instance consequences. Additionally, the manufacturer may
260 be suspended from the DLC program for a period of up to 12 months. A suspension
261 prohibits manufacturers from submitting or qualifying any products during that
262 timeframe.
- 263 c. **Third instance:** All first and second instance consequences. Additionally, the
264 manufacturer’s remaining products on the QPL, including private labels, may be
265 delisted until compliance is assured.
- 266 2. Selected product falls outside Table 2 tolerances, but still meets DLC Technical Requirements:
- 267 a. **First instance:**
- 268 i. **Parent Product:** The manufacturer is required to update the individual
269 product on the QPL (at the full application fee), or may opt to have the
270 product delisted. If the manufacturer chooses to update the product, [a new](#)
271 [application](#) must be submitted within 15 business days of receiving the
272 results. If this time elapses without an update application being submitted, all
273 associated child products and private labels (if selected product was an OEM)
274 will be delisted. If selected product was a private labeled product, the OEM’s
275 product will not automatically be delisted. The selected product’s family, as
276 well as the equivalent family from any private labeler, may be flagged for
277 additional screening in a future round of testing.
- 278 ii. **Child Product:** The manufacturer is required to update the individual product
279 on the QPL (at the full application fee), or may opt to have the product
280 delisted. If the manufacturer chooses to update the product, a new
281 application must be submitted within 15 business days of receiving the
282 results. If this time elapses without an update application being submitted,
283 the product will be delisted. If selected product was a private labeled product,
284 the OEM’s product will not automatically be delisted. The selected product’s
285 family, as well as the equivalent family from any private labeler, may be
286 flagged for additional screening in a future round of testing.
- 287 – If a child product fails the Table 2 requirements and the data
288 demonstrates that it should become the new worst-case product in
289 the family (i.e. it should be a parent), the whole family will be
290 delisted. The manufacturer must [submit a new application](#) to ensure
291 compliance. New model numbers are not required. The new family
292 may be flagged for additional screening in a future round.
- 293 b. **Second instance:** All first instance consequences. Additionally, the manufacturer may
294 be suspended from the DLC program for a period of up to three months.
- 295 c. **Third instance:** All first and second instance consequences. Additionally, the
296 manufacturer’s remaining products on the QPL, including private labels, may be
297 delisted until compliance is assured.

298 3. Selected product meets or exceeds the DLC Technical Requirements, and tests within
299 tolerances listed in Table 2 above: No action taken. The manufacturer may opt to [update the](#)
300 [product](#) at their discretion. Normal application fees will apply.

301 **Non-Compliance Outside of Product Testing (during surveillance testing selection)**

302 1. Manufacturer declines to move forward with the selection:

303 a. **First time declining:**

304 i. **OEM:** The selected product will be delisted. If it was a parent product, the whole
305 family will be delisted. Any delisted products will have their associated private
306 labeled products delisted.

307 ii. **Private Labeler:** The selected product will be delisted. If it was a parent product,
308 the whole family will be delisted. OEM products will not be delisted.

309 iii. **Both:** Increased likelihood of another product from the manufacturer being
310 chosen for surveillance testing.

311 b. **Second time declining:** All first time declining consequences. Additionally, the
312 manufacturer may be suspended from the DLC program for a period of up to six
313 months, including delisting of other products currently listed on the QPL.

314 2. Manufacturer misses a published deadline (response to notification, invoice deadline,
315 procurement deadline, etc.):

316 a. **OEM:** The selected product will be delisted. If it was a parent product, the whole
317 family will be delisted. Any delisted products will have their associated private labeled
318 products delisted.

319 b. **Private Labeler:** The selected product will be delisted. If it was a parent product, the
320 whole family will be delisted. OEM products will not be delisted.

321 c. **Multiple missed deadlines (OEM or Private Labeler):** All first time consequences.
322 Additionally, the manufacturer may be suspended from the DLC program for a period
323 of up to six months, including delisting of other products currently listed on the QPL.

324 3. Product misrepresentation:

325 a. Product misrepresentation is handled on a case-by-case basis and consequences may
326 include product delistings, suspensions, and/or fines. Fines will only be used as a last
327 resort to recover the costs associated with prolonged efforts to bring a manufacturer
328 into compliance.

329 4. Other/Miscellaneous:

330 a. Situations not outlined in this policy will be handled at the sole discretion of the DLC.

331

332 G. Re-listing Products

333 Products which are:

- 334 1. Delisted due to declining the selection or non-response:
- 335 a. These products may be re-submitted through [the normal application process](#) no
336 earlier than six months after the date delisted. Normal application fees will be
337 assessed.
- 338 2. Delisted due to failing the Table 1 requirements:
- 339 a. These products may be re-submitted through [the normal application process](#) with
340 *new testing and new model numbers*. The same model number may not be used
341 unless otherwise noted in section F. Normal application fees will be assessed.
- 342 3. Delisted due to failing the Table 2 requirements:
- 343 a. These products may be re-submitted through [the normal application process](#) with
344 new testing. Normal application fees will be assessed. New model numbers are not
345 required.
- 346 a. Note that this does not apply to products that failed only the Table 2 requirements
347 and were updated within the allotted timeframe.
- 348 4. Delisted due to failing Table 1 requirements, *but* surveillance testing data falls within the Table
349 2 tolerances:
- 350 a. These products may be re-submitted through [the normal application process](#) with
351 new testing. Normal application fees will be assessed. New model numbers are not
352 required.
- 353 b. Note: This applies only to the three metrics currently in Table 2.

354 Safety Certification Verification

355 In an effort to streamline the application submission process, the DLC [changed the verification process](#)
356 [for safety certification coverage](#) on March 26, 2018 (Technical Requirements V4.3). With this revision,
357 the DLC only requires a compliance certificate and statement from the manufacturer certifying that all
358 products contained therein are covered.

359 To ensure the veracity of claims made during qualification, the DLC will carry out a more in-depth
360 verification on a select number of products each year. If qualified under Technical Requirements V4.3 or
361 later, that product's safety certification will automatically be reviewed during the normal surveillance
362 testing process. Additionally, the DLC reserves the right to examine products for safety compliance
363 outside of the traditional surveillance testing process. While manufacturers will not receive explicit
364 notification of this verification, manufacturers will be notified in the event of non-compliance.

365

366 H. Safety Certification Verification Process

- 367 1. Product is selected by the DLC, either as part of the existing Surveillance Testing Program or
368 independently.
- 369 2. The DLC verifies the following information from relevant safety organization:
 - 370 a. Manufacturer Name
 - 371 b. Model Number
 - 372 c. Unique Identifier/reference number
 - 373 i. CSA: Certificate Number
 - 374 ii. Intertek: Report Number
 - 375 iii. UL: File Number
 - 376 iv. Other: the DLC will work to identify proper documentation reference number
- 377 3. The DLC confirms whether or not the product is covered by the certificate/report/file
378 number/etc. provided during qualification.
 - 379 a. Note that if, after qualification, the safety documentation gets updated so that any
380 model number(s) listed on the QPL are no longer covered by the original safety
381 certificate, it is the responsibility of the manufacturer to submit the revised
382 documentation to the DLC so that the DLC records can be updated accordingly.

383 I. Safety Certification Verification Consequences

- 384 1. All products sharing the family ID with the non-compliant product will be delisted.
 - 385 a. In the event that multiple safety documents were submitted within a single family ID,
386 products will be reviewed by the DLC prior to delisting to ensure that covered
387 products are not delisted.
- 388 2. Products shall not be re-listed on the QPL for at least six months from the date of delisting.
389 Additionally, all other re-listing requirements (Section J) must also be met.
- 390 3. Non-compliant products will be referred to the proper safety organization.
- 391 4. DLC Members will be provided with all products delisted due to non-compliance.

392 J. Safety Certification Verification Re-Listing

393 Delisted products may be submitted through [the normal application process](#), with new application fees.
394 Several changes will be made which are unique to this re-listing application:

- 395 1. Products shall not be re-listed on the QPL for at least six months from the date of delisting.
- 396 2. Safety certification will be verified up front during the initial review, similar to the application
397 submission process prior to Technical Requirements V4.3 (i.e. a digital signature confirming
398 safety coverage will not be sufficient).

399
400

3. The appropriate safety organization must send documentation directly to DLC review staff to verify coverage of all models in the application.

DRAFT
